

Electric Fields

Example

Set

Purpose: Illustrates electric fields surrounding conductors.

This kit contains a number of glass plates with attached conductors, intended to be displayed on an overhead projector. The electric fields are revealed by sprinkling grass seeds on the plate and gently tapping with a mallet to align them.

Note:

While this looks to be a nice set, I only got marginal results. If you want to use it, plan to invest some time in practicing and seeing what works.

Extra Equipment: Electrostatic Generator

Location: Shelf E2
